

AMC GROUT 20™

Cement & Grouting Additives

IMDEX™

Description

GROUT 20™ is an abandonment and grouting material designed to be mixed with fresh water to form a semi rigid plug. This semi rigid plug can be used for plugging drill holes or grouting water wells and monitoring wells.

Application

GROUT 20™ is designed to be applied as a 20% solids mix. The mixture is pumpable using most common pumping equipment.

Once the 20% mixture is made it can be immediately pumped down hole through a tremie line. To ensure optimal displacement the grout should be pumped through the tremie line from the bottom to surface.

GROUT 20™ is sensitive to water quality. It may not be suitable for use where total hardness exceeds 500mg/L and/or where chlorides exceed 1,500mg/L. Pilot testing using site make up water is advisable prior to use.

Recommended Treatment

To mix a 20% solids slurry 250kg of AMC GROUT 20™ should be mixed into 1000L of fresh water. Alternatively, a 50lb bag of GROUT 20™ should be mixed per 24 gal of fresh water.

Please Note: Several factors will dictate the most appropriate concentration rate. Please contact your nearest representative for optimum results.

Typical Physical Properties

Appearance:	Dark red to brown powder
Solubility in water:	Insoluble
