

LOGRx RELEASE NOTES

LOGRx 2.2.32 App Release (May 2025) includes the following changes:

Custom List values overwriting Structural Features Description

Values entered into the Custom Lists fields were overwriting the Structural Feature Description field for a reading as viewed in IMDEX HUB-IQ. This has been fixed.

Custom List values overwriting other Custom List values

An issue was identified where values entered against a particular Custom List were overwriting and replacing values entered in a different Custom List field. This has been fixed.
