

Description

xFORM D+ is a premium, multifunctional product that delivers viscosity, hole cleaning and fluid loss control. xFORM D+ is a simple to use powder product that will help improve drilling efficiency by improving hole cleaning and fluid loss control.

Application

While xFORM D+ is highly dispersible and therefore well suited to be used where minimal agitation exists, where possible, it should be added via a hopper and allowed the blend in prior to use.

Typical Physical Properties

Appearance: White to off white powder
Solubility in water: Soluble

Recommended Treatment

Typical concentrations for xFORM D+ range from 1.5 – 4kg / m³. If chlorides are more than 10,000mg / L or total hardness is more than 500mg/L the viscosity yield of xFORM D+ will be reduced and the required dosage will need to be increased to achieve the desired properties.

Advantages

- Reduces rod chatter
- Simplifies workflows – one product to add in place of multiple
- Suitable for use in all water types
- Disperses readily into the mix tank
- Eliminates drilling fluid product waste due to poor mixing

Please Note: Several factors will dictate the most appropriate concentration rate. Please contact your nearest IMDEX AMC representative for optimum results.
